

Rama Rajeswari R

AI Evaluation Architect | Agentic QA & Reliability Leader

[LinkedIn](#) • +91 8884784488 • sendmail2ramaa@gmail.com • [Portfolio](#)

PROFESSIONAL SUMMARY

Accomplished QA and SDET leader with 15+ years of experience designing scalable test architectures, driving AI-first quality initiatives, and leading global QA teams in SaaS and Cloud environments. Proven success in implementing intelligent automation frameworks, performance benchmarking pipelines, and cross-functional quality strategy that improves speed, stability, and developer productivity.

TECHNICAL SKILLS

Languages - Java, Python

Agentic AI & Evaluation - Generative AI, Prompt Engineering, LangChain, Crew AI, AWS Strands, RAG pipeline, DeepEval, Ragas, LLM-based validation AI test automation, Arize

Testing - Selenium, Playwright, Cucumber/BDD, Jmeter, Performance, Regression & API Testing

Tools & DevOps: Datadog, AppDynamics, Splunk, ELK, Jira, Git, Jenkins, AWS, Docker, Kubernetes

Domain - SaaS, Revenue and Billing, OCI(IaaS), APM/ Observability

Soft Skills - Agentic AI Training, Team leadership, cross-functional collaboration, technical mentoring

KEY PROJECTS

Agentic AI Market Research Assistant | Independent, 2026

- Designed and built a multi-agent orchestrator (AWS Strands SDK + Groq) using an agent-as-tool pattern with dedicated sub-agents for job-market and tooling-trend research; deployed with a dedupe memory layer and an automated digest pipeline via GitHub Actions
- Identified a grounding/hallucination failure mode where sub-agents cited tools or products absent from retrieved source data; built an LLM-as-judge evaluation approach and debug tooling to catch it, seeding a broader agentic-AI evaluation framework initiative
- Submitted an evaluation-hardened version to AWS's "Agents for Humans" hackathon (Strands Agents SDK track), adding rate limiting, prompt caching, structured output, and steering features

Test Pilot | Chargebee

- Architected and implemented Agentic framework acting as toolkit for Requirement Analysis, Test Case Generation in BDD, Automation code Generator, reduced QA cycle time by 60%

ATPAR | Chargebee

- Architected and implemented One-Click performance Test Automation Framework using Jmeter+Github+JTL reporter for continuous Performance monitoring that reduced test time from **~3 days to 1 hour** enabling faster feedback loops

HealthCare RAG Assistant | IIT Guwahati

- Architected and implemented Patient Healthcare App based on RAG pipeline that helps doctors to quickly assess patient past Medical history and plan for effective treatment.

PROFESSIONAL EXPERIENCE

Staff SDET/ Architect | Chargebee

2022 – 2026

- Built and led a **10-member Performance Test team** from scratch, including tool selection, **shift left CI/CD integration**, and test execution
- Set up release gating for Micro services Performance benchmarking, API Performance Benchmarking.
- Designed and rolled out LLM-integrated testing platform
- Collaborate with cross functional teams like Cloud Infra, SRE, GTM , pre-sales to create RCAs for Production Incidents and fill gaps in Engineering/ QA process
- Review test infrastructure requirements, cost projections, developer productivity and work with Leadership in Engineering Excellence initiatives

Leader, Software Engineering | AppDynamics

2020 – 2021

- Lead through **5 different products** each having different release cycles with End to End ownership in creating/ maintaining quality Test Automation solutions including Automation Frameworks to effectively reduce test efforts
- Designed and implemented full-cycle **End-to-End Automation** from scratch, reducing product release time from **several hours to under 60 minutes**, improving delivery efficiency.
- Create Test Applications in Python to enable Integration tests
- Create test harness in **AWS instance and K8s clusters (EKS)**
- Track Test cycles for several projects and ensure quality release sign off

Lead Automation Engineer | Liberty Wireless Technologies

2019 – 2020

- Lead QE efforts from requirement analysis to Automated pipeline deliverable and production support
- Achieved build stability and functional integrity by identifying and automating P0 (BVT) tests Test Execution/ Planning QE Activities for micro services architecture

Senior Member of Technical Staff | Oracle

2007 – 2019

- Created and maintained API Functional test framework for Oracle Public cloud services offering - **Iaas (OCI-c) using Java**

- Creation and automation of End-to-End Automation Framework for CGBU-BRM product based on BDD using **Java + Cucumber + selenium** Web driver frameworks

EDUCATION/ CERTIFICATIONS

B.E. Electrical and Electronics, Bharathiar University

Post Graduate Certificate in Artificial Intelligence and Machine Learning - IIT Guwahati

ISTQB-CSTE - Certified Software Test Engineer
